RUTF-DTAP Monitoring Platform

Ready-to-Use Therapeutic Food · Digital Traceability & Accountability Platform

Pilot: all LGAs in Katsina State

Every sachet of RUTF tracked, verified and accounted for, from the State store to the child.

One trusted record of every hand-over in the government supply chain. Discrepancies are found automatically, every one is followed by a named person to verified closure, and the State, LGAs and partners get the same evidence, even where there is no network signal.

State store	LGA stores	OTP sites	Supervision	Findings	Verified closure
issues by lot & expiry	receipt confirmed	daily dispensing	GPS-verified visits	raised automatically	within 30 days

WHAT THE PLATFORM DOES

1. **Records every movement, offline**
   Facility staff record receipts, daily dispensing, counts and losses on an Android phone that works without signal and syncs itself. Offline Sync Health

2. **Keeps one ledger that can't be rewritten**
   Balances are computed from entries by lot and expiry, never typed in; an entry is never edited or deleted, only voided with a reason. Stock Ledger

3. **Finds problems automatically**
   Every night the ledger is checked against the programme's thresholds: stock variance, short-dispensing, transfer shortfalls, late reporting, expiry. Findings Register

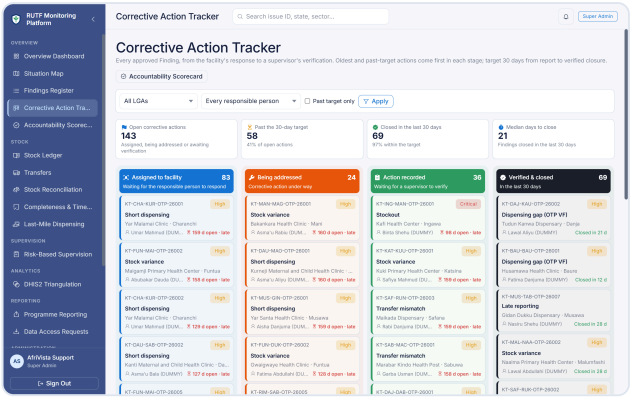

4. **Follows each one to verified closure**
   Every Finding has an owner and a 30-day target, and a supervisor verifies the fix. LGAs are scored on closure and timeliness. Corrective Action Tracker, Scorecard

5. **Checks the last mile and the national system**
   Sachets dispensed against prescribed, supervisors' register checks, and DHIS2 monthly reports set beside the ledger. Last-Mile Dispensing, DHIS2

6. **Reports the month in one page**
   A Monthly Programme Report written from live data, ready to print for the State, LGAs and UNICEF. Programme Reporting

Overview Dashboard: what needs attention first, and stock at every level.

Corrective Action Tracker: every Finding by stage until verified closed.

IN THE PILOT DEMONSTRATION · SEPTEMBER 2026

307	98.0%	97.5%	90.8%	100%	20.9 d
stores and OTP sites in 34 LGAs on one ledger	of transfers delivered in full; shortfalls raised	of supervision visits GPS-verified on site	of DHIS2 reports agree with the ledger	of Findings raised by automatic checks	median from Finding to verified closure

BUILT-IN SAFEGUARDS

- **Role-based access** enforced by the database for web, app and API; 202 of 202 role checks pass.
- **Data leaves by approval only:** scoped to the requester, downloadable once, on record.
- **No child-level data:** aggregate OTP tallies only. Designed for the NDPA 2023.
- **Full Audit Trail** written by the database itself: who changed what, and when.
- **Nothing deleted:** ledger entries are voided with a reason; Findings stay on record.
- **Findings are for review, not accusation:** the score shows where support is needed.

Ready for the next state 1 Create the programme · 2 Load the facility registry · 3 Confirm the thresholds · 4 Invite the teams · 5 Install the app · **No new software.**

Figures are from the platform's demonstration data (marked DUMMY) and illustrate how it works; they are not programme results.
